

Kidney Loop Filtration Buggies

FOR HIRE

The fast, efficient way to clean fuel and lubricants

Oil and component life can be extended by significantly reducing contaminant levels.

Filter buggies of various sizes are available to meet your requirements for use during service intervals and periods of down time.

The FTA patented filtration elements filter out contaminants and assist in maintaining manufacturers' specified cleanliness levels.

Oil sampling is available if required, using samples taken before, during and after filtration.

Filtergrams for elements are available on request, to determine condition and ensuring that you get maximum element life.

FM504 Unit set up to filter at 8 litres/min for heavy lubricants such as final drive oil.

FM1640 Up to 45 litres per minute filtering rate. Ideal for large capacity fuel and lubricants.

FM506 Filters at up to 20 litres per minute.
